

This information guide explains how to add carriage/handling logos to your label designs (a variety of symbols are available as bitmaps from Hibiscus PLC, free of charge to support contract holders; this way up, fragile, keep dry etc.).

1. Open HibSoft Label Designer/DesignerPro and then load the label template to which you wish to add the logo.
2. Select the Bitmap Logo Field icon from the button bar on the right of the screen (or select Fields / Add / Bitmap Logo from the menu bar and draw a box on your label design to hold the image. Size the box to the approximate size you wish the image to appear.
3. Double-click on the box to access its properties.
4. On the 'Logo' tab, click on the [Select File] button and use the browser window to find and select the file. Filename and location should now be filled in on the properties box. Click the 'Maintain Aspect Ratio' box to prevent the image being stretched disproportionately within the box.
5. If you wish to draw a border around the image, click on the Borders tab, enter a border width and click on the buttons for each side of the image on which you wish a border line to be drawn.
6. Save the template.

Symbols currently available from Hibiscus PLC:

Do Not Drop
donotdrop.bmp

Fragile
fragile.bmp

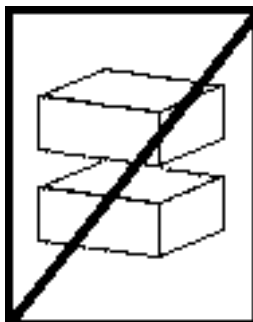

Handle With Care
handlewcare.bmp

Keep Dry
keepdry.bmp

This Way Up
thiswayup.bmp
