

Using SDS Professional User Defined Fields in HibSoft LabelPro

Use the chart below to record the User Defined Fields you have created in SDS Professional and the data item numbers to select those fields for labelling.

	Phrase-1 501	Phrase-2 502	Phrase-3 503	Phrase-4 504	Phrase-5 505	Attribute-1 506	Attribute-2 507	Attribute-3 508	Attribute-4 509	Attribute-5 510
Section-1 801										
Section-2 802										
Section-3 803										
Section-4 804										
Section-5 805										
Section-6 806										
Section-7 807										
Section-8 808										
Section-9 809										
Section-10 810										
Section-11 811										
Section-12 812										
Section-13 813										
Section-14 814										
Section-15 815										
Section-16 816										

To call the information contained in any user defined field into HibSoft LabelPro to appear in a label you need to know the relevant data item number for that field. This can be determined from the above chart by taking the three digits representing the section followed by the three digits representing the phrase or attribute; eg: user Phrase 3 in Section 11 is data item 810503.

For labelling, create a variable field named using the following naming conventions:

Phrases: \$ {dataitem no} : {language} eg. \$810503:44 would select dataitem number 810503 in English

Attributes: \$ {dataitem no} : 0 eg. \$810507:0 would select dataitem number 810507 (no language choice)
